

AquaSafe⁺

ANTI-VIRAL

The paint that kills coronavirus on walls

Walls in public places are frequently exposed to microbial contamination yet are not deemed as a priority for cleaning down and sanitizing. Diseases like the Coronavirus are spread through respiratory droplets and contact with surfaces. Walls can harbour these dangerous organisms for days, therefore significantly increasing the risk of transmission in communal, public, and high traffic areas.

Ideal for creating safe environments in places such as:

- Schools
- Restaurants
- Hotels
- Healthcare facilities
- Pubs
- Shopping centres

AquaSafe⁺ keeps you protected

ANTI-VIRAL

AquaSafe+ is an antiviral and antimicrobial wall coating providing a unique solution to this kind of wall contamination. It has been tested successfully in conjunction with Coronavirus to ISO 21702:2019. Walls coated with this paint will permanently provide resistance to bacteria and viruses including the Coronavirus. Whilst this is not a substitute for good cleaning and hygiene practices, it will make public spaces significantly safer for all who use them.
